MOJO Platform:
Transforming IT Operations for the Manufacturing Industry

Intelligent Infrastructure Automation with MOJO

Empowering Manufacturing Through Advanced Automation

Manufacturing organizations operate in a high-stakes environment where efficiency, reliability, and security are paramount. Scaling operations, managing complex IT infrastructure, and keeping production running smoothly rely on a robust and automated IT foundation that can minimize downtime, meet compliance standards, and optimize resources.

The MOJO Platform revolutionizes data center operations with a feature-rich, automation platform designed to address the unique demands of modern manufacturing businesses. From enabling zero-touch provisioning (ZTP) to providing integrated storage control, MOJO empowers manufacturers to achieve operational excellence.

Challenges Facing the Manufacturing Industry

Operational Inefficiencies: Manual provisioning and management of IT infrastructure increases human error and delays deployment, affecting time-to-production.

Scalability: Rapid business expansion or seasonal demands strain traditional infrastructure, leading to performance bottlenecks.

Limited Visibility: Disconnected systems and a lack of real-time insights limit control over data center operations required for supporting Industrial IoT (IIoT) and smart manufacturing.

Security Vulnerabilities: Firmware and BIOS integrity issues pose significant risks and can disrupt manufacturing systems.

Compliance and Audit Readiness: Manufacturers must adhere to increasingly stringent regulatory requirements for data protection, especially when running sensitive or proprietary operations.

MOJO Platform: Core Capabilities for Manufacturing

1. Zero-Touch Provisioning (ZTP)

Automate the provisioning of servers and IT systems without manual intervention. Whether you're deploying infrastructure for IIoT devices, managing intelligent production lines, or scaling up for increased operational needs, ZTP ensures rapid resource deployment while minimizing costly delays and human errors.

2. Intelligent Discovery of Servers

MOJO automatically identifies and inventories both on-premises and virtualized servers. Gain full visibility of your infrastructure, including servers supporting production, supply chain logistics, and smart factories, ensuring uptime with proactive monitoring.

3. Robust Security

Manufacturers face increasing threats to their IT infrastructure, from firmware vulnerabilities to data breaches. MOJO secures the BIOS and firmware of your servers, protecting your production processes and maintaining the integrity of critical manufacturing systems.

4. Automated Updates for BIOS and Firmware

Outdated BIOS and firmware cause performance issues and security gaps. MOJO enables batched BIOS and firmware updates across your data center, ensuring uninterrupted uptime, optimized system performance, and secure production environments.

5. Custom Compliance Reports

Simplify audits and streamline compliance with MOJO's customizable reporting capabilities. Tailored reports help manufacturing organizations meet data protection mandates, industry-specific certifications (e.g., ISO 27001), and other regulatory requirements with minimal manual effort.

What MOJO Solves for You

MOJO is specifically designed to address manufacturing IT challenges and deliver tangible outcomes:

Minimize Downtime: MOJO's automation and predictive capabilities ensure that server provisioning, updates, and monitoring happen without interrupting production workflows.

Scale with Confidence: Effortlessly scale IT systems to support plant expansions, new production lines, or increased IIoT connectivity without manual effort or delays.

Full Control of Infrastructure: Gain total visibility of your IT environment, giving you the confidence to manage and monitor complex manufacturing systems, including production-critical assets.

Enhance Security: Safeguard your manufacturing infrastructure against breaches and vulnerabilities with robust security built into all IT automation processes.

Simplify Compliance: Generate instant, customized compliance reports for regulations such as GDPR, CMMC, or manufacturing-specific data requirements to ensure audit readiness.

Real-World Use Cases of MOJO in Manufacturing

Smart Factory Operations: MOJO ensures real-time IT infrastructure visibility for efficient and uninterrupted production across intelligent automated assembly lines.

IIoT Infrastructure Scalability: Automating server provisioning allows IT to seamlessly deploy infrastructure required for thousands of IIoT sensors and connected devices.

Disaster Recovery and Uptime: Proactively secure your operations with automated updates and predictive monitoring, reducing downtime and preventing potential disruptions.

Why Choose MOJO for Manufacturing?

MOJO Platform is not just a hardware automation solution—it's a transformation. By automating, securing, and scaling IT operations in manufacturing environments, MOJO allows your organization to stay ahead of changing demands, focus on strategic intiatives and lead in the age of digital manufacturing.

Modernize your IT Infrastructure with MOJO for Manufacturing
